WHAT ARE BUSINESSES LOOKING FOR WHEN IT COMES TO OFFSITE BACKUP?

1. IS IT RELIABLE?

We guarantee 99.9% uptime.
The system has triple redundancies and is Sarbanes- Oxley compliant.

2. WHERE IS IT BEING STORED?

Our Data Centres are located in Toronto and Montreal. This is very important because you have no legal recourse, or guarantee in the event your US/offshore provider goes out of business.

3. IS IT SECURE?

We are compliant with (AES) 128 Bit American Encryption Technology Standard. Once you have set a password that becomes the encryption key. If you lose your password we can't retrieve your information.

4. CAN I GET MY DATA BACK?

Anytime, 24/7 from any where you can get an internet connection. Simply download the Mastermind Backup software, enter your user name and password and you can retrieve anything you have backed up.

100% Canadian

On-site uniformed security, man the premises and surrounding area 24/7/365 as well as a customized security system and protocol.

This system is a configurable point monitoring and access control system providing powerful means of monitoring building security devices and systems such as card readers, alarm management, recording of data and comprehensive reporting capabilities as well as a photo identification system. Incorporated into this system are optical turnstiles, which provide a second level of security at the main entrance.

There are over 50 closed circuit television (CCTV) cameras located through-out the building, monitoring areas such as mechanical areas, tenant floor, loading dock and high security areas such as the Meet-Me-Room and hydro vault.

This system is adaptable in that tenants can have their own proprietary security systems working in conjunction with the building security. Access to all high security areas, such as the Meet-Me-Room and Riser Systems require a building chaperone to monitor all personnel .

Twelve day up time in the event of a hydro interruption. Backup (UPS) Uninterruptible Power Supplies to insure a smooth transition from street hydro to diesel generators.

300 meg up Fibre input for the most reliable and fastest communications in the industry.

24/7/365 Security personal Card Access with Recorded CCTV

Our State of the Art Servers and Backup Disk Array units are located in Biometric and ID Access only Climate Controlled Suites.

Help Desk – *friendly, knowledgeable*

HOW IT WORKS

1. Download the program from our website on to your Work station(s) and or your Server(s).
2. Configure via the built in wizard.
3. Set the file and records you wish to backup
4. Set the scheduled time.
5. Sit back and relax knowing your data is safer than a bank vault.

COST SAVINGS

- Avoid costly software licensing and expensive hardware.
- No more tapes to buy and drives to maintain.
- Eliminate the labour cost and time involved backing up your data everyday.
- Recover deleted files.
- Avoid the security risk of leaving your office with unencrypted tapes, CD/DVD's, portable hard drives and memory sticks.
- Avoid the risk of damaging backup devices when transporting offsite.

Our Company

Mastermind Data Corporation was formed to fill a need in the small to medium business sector for customized data management solutions for the distribution industry. We have over the years designed leading edge data systems to manage everything from CRM, Quoting, Order entry, Inventory, Production, Assembly, Packing Slips, Invoices and seamless interfaces to leading book keeping systems.

We have also produced web based interactive marketing systems for Dairy Queen Canada to produce online coupons.

In recent years we have branched out into other software products to service our customers needs. We have offices in Toronto and Dundas to serve the golden horse shoe area.

Testimonials

"I took months and \$30,000.00 to recover our data after a fire and something I didn't think of, the sprinklers that caused 3" of water and ruined 8 computers caused all of our data loss. If we would have had this system installed I would have avoided all of this"

Charles Lyall - Eurolite

"I called our IT guys in and they said the drive was toast, so use your latest backup. I went to the server and found out the backup hadn't been working for weeks! After 3 weeks and \$2,000.00 we retrieved the data. I now rest at night knowing that Mastermind is on the job."

Thanks, Dave Hill of the Hills Group

Testimonials

"I purchased a 100 gig drive at Future shop on sale for \$99.00. My plan was to backup every night and take it home. Little did I know that these drives are not designed to be transported. I kept tossing it in my purse for months then one day it wouldn't boot up. According to the drive recovery company it's going to cost \$1,500 to retrieve the data because the drive head fell off. I will now be backing up remotely."

Arlene MacFarlane

"I was working for the Art Gallery of Hamilton and we were storing our Rotary Clubs spreadsheets on a memory stick. I pulled it out of the computer too quickly and blew the controller chip according to the recovery company. They retrieved the data for \$250.00. I now backup with Mastermind."

Tina
